Conference Series Ltd organizes 3000+ events inclusive of 600+ Conferences, 1200+ Workshops and 1200+ Symposiums on various topics of Science and Technology across the globe with support from 1000 more scientific societies. Conference Series Ltd also publishes 700+ Open Access Journals which contains over 50000 eminent personalities and reputed scientists as editorial board members.

Curing, treating, diagnosing the birds and animals is a diverse in veterinary field. Care and love towards the animals, birds and treating them like their own is so fascinating, this veterinary sector will bring animals very close to humans, also helps to understand their pain and problems. Not every living thing has ability to express their feelings like human did. As humans we have to understand how these animals and birds feel the pain when they get hurt or injured. Having a dog or a bird as pet is not a great thing; we need to have some concern towards them. A veterinarian contributes to provide healthcare for the pets, farm animals and zoo animals, by veterinary services. Everyone is willing to have a pet now days they mostly preferred private clinics for treatment. Eventually there will be an unprecedented growth in animal products technology sector and poultry sector, in result an increased demand for veterinarians in different sectors of livestock and poultry.

The tertiary education of veterinarians for high standard veterinary education is a key to provide potential veterinarians with the necessary knowledge to perform efficiently and to support Veterinary Services. The quality of veterinary education is failing to meet the requirements for Veterinary Services, in many countries notably in developing and in-transition countries and the need for veterinary education to be strengthened. The main concept of conducting VETERINARYCONG-2021 is to give best experience for young veterinarians to share their knowledge in veterinary service. Yet these are the genuine profile of the veterinary medicine and include veterinary care or new treatment.
